

Proportional directional valves high performance

rugged digital, direct operated, with position transducer and positive spool overlap

71

L

DHZO-TEB. DHZO-TES DKZOR-TEB, DKZOR-TES

High performance direct operated digital proportional valves specifically designed for high speed closed loop controls.

They are equipped with LVDT position transducer and positive spool overlap for best dynamics in directional controls and not compensated flow regulations.

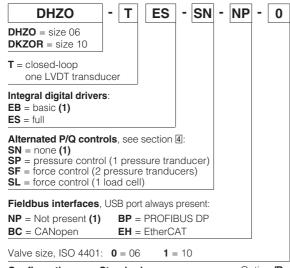

The integral digital electronic driver performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting.
High performances valves are available in

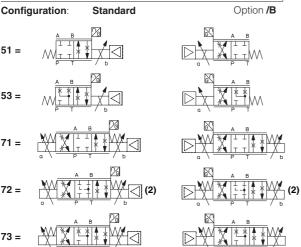

TEB basic execution with analog reference signals and USB port for software functional parameters setting or in TES full execution which includes also optional alternated P/Q controls and fieldbus interfaces for functional parameters setting, reference signals and real-time diaanostics.

Size: **06** and **10**

Max flow: up to 80 and 170 I/min Max pressure: 350 bar (DHZO) 315 bar (DKZOR)

1 MODEL CODE for STANDARD SPOOLS

5 / * Seals material, see sect. 6, 7: = NBR PE = FKMBT = HNRR Series number

Hydraulic options, see section 10:

B = solenoid, integral electronics and position transducer at side of port A

Y = external drain

Electronic options, see section [11]:

I = current reference input and monitor 4÷20 mA (omit for standard voltage reference input and monitor ±10 V)

Only for SN (3):

F = fault signal

Q = enable signal

Z = double power supply, enable, fault and monitor signals - 12 pin connector (4)

Only for SP, SF, SL:

C = current feedback for remote transducer(s)

Spool size:	14 (L)	1 (L)	2 (S)	3 (L,S,D)	5 (L,S,D)	
DHZO =	1	4,5	8	17	28	
DKZOR =	-	-	-	45	75	
Nominal flow (I/min) at Δp 10bar P-T						

Spool type, regulating characteristics:

S = progressive **D** = differential-progressive P-A = Q, B-T = Q/2P-B = Q/2, A-T = Q

(3) F, Q, Z options are standard for SP, SF, SL

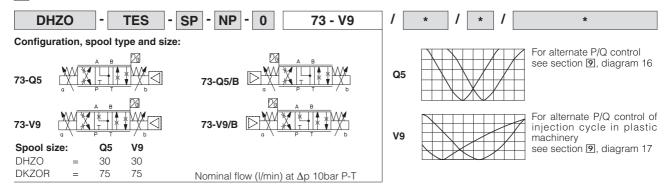

(2) only for DKZOR

(4) double power supply only for TES

L = linear

⁽¹⁾ TEB basic execution available only in version SN-NP

2 MODEL CODE for OPTIONAL SPOOLS - refer to section 1 for valve model code and options

3 GENERAL NOTES

DHZO-TEB, TES and DKZOR-TEB, TES proportional valves are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components. The electrical signals of the valve (e.g. monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

4 ALTERNATED P/Q CONTROLS - only for TES with valve configuration 73

S* options add the closed loop control of pressure (SP) or force (SF and SL) to the basic functions of proportional directional valves flow regulation. A dedicated algorithm alternates pressure (force) depending on the actual hydraulic system conditions.

An additional connector is available for transducers to be interfaced to the valve's driver (1 pressure transducer for SP, 2 pressure transducers for SF or 1 load cell for SL). Main 12 pin connector is the same as /Z option plus two analog signals specific for the pressure (force) control. The alternated P/Q controls are specific for valve configuration 73, optional spools type Q5 and V9 recommended, see section [2] For detailed information and connector wiring of options SP, SF, SL see tech table GS212.

5 FIELDBUS - only for TES

Fieldbus allows the direct communication of the proportional valve with machine control unit for digital reference signal, diagnostics and settings of functional parameters. Analog reference signal remain available on the main connector for quick commissioning and maintenance. For detailed information about fieldbus features and specification see tech table **GS510**.

6 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Assembly position	Any position						
Subplate surface finishing	Roughness index, Ra 0	Roughness index, Ra 0,4 flatness ratio 0,01/100 (ISO 1101)					
MTTFd valves according to EN ISO 13849	150 years, see technica	150 years, see technical table P007					
Ambient temperature range	standard execution = -20°C ÷ +60°C						
	/BT option = -40° C ÷ $+6$	60°C					
Storage temperature range	Standard execution = -	20°C ÷ +70°C					
	/BT option = -40° C ÷ +	70°C					
Coil resistance R at 20°C	DHZO = $3 \div 3.3 \Omega$	$DKZOR = 3.8 \div 4.$	1 Ω				
Max. solenoid current	DHZO = 2,6 A	DKZOR = 3 A					
Max. power	50 Watt

9 DIAGRAMS - based on mineral oil ISO VG 46 at 50 °C

Note: Hydraulic configuration vs. reference signal for configurations 71, 72 and 73 (standard and option /B)

$$\text{Reference signal } \begin{array}{l} 0 \;\; \div \;\; +10 \; \text{V} \\ 12 \;\; \div \;\; 20 \;\; \text{mA} \end{array} \right\} P \rightarrow \text{A / B} \rightarrow \text{T} \qquad \text{Reference signal } \begin{array}{l} 0 \;\; \div \;\; -10 \; \text{V} \\ 12 \;\; \div \;\; 4 \;\; \text{mA} \end{array} \right\} P \rightarrow \text{B / A} \rightarrow \text{T}$$

16 = linear spool Q5

Q5 spool type is specific for alternate P/Q controls in combination with S* option of digital integral drivers (see tech table GS212). It allows to control the pressure in A port or B port and it provides a safety central position (A-T/B-T) to depressurize the actuator chambers.

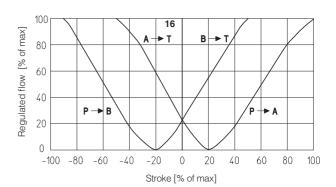

The strong meter-in characteristic makes the spool suitable for both pressure control and motion regulations in several applications.

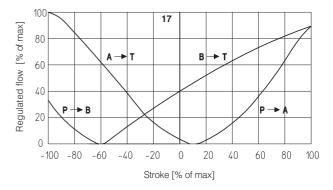

V9 spool type is specific for alternate P/Q controls in combination with S* option of digital integral drivers (see tech table **GS212**) or Z-ME-KZ/GI axis card (see tech table **G345**).

This spool is specially designed to manage the whole injection cycle in plastic machinery, thanks to the following specific features:

- strong meter-in characteristic to allow the pressure control in A port during the holding pressure (P-A) and the plasticizing (A-T) phases
- safety central position (A-T/B-T) to depressurize the actuator chambers
- large A-T and B-T flow capability, required during the plasticizing phase, to discharge big volumes from high differential injection cylinders with low pressure drops and permitting the contemporary oil suction from tank

9.3 Operating limits

DHZO

1 = spool L 14

2 = spool L1

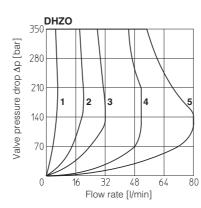

S2 3 = spool

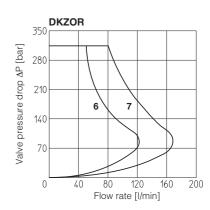

4 = spool L3, S3, D3 **5** = spool L5, S5, D5, V9

DKZOR

6 = spool S3, L3, D3

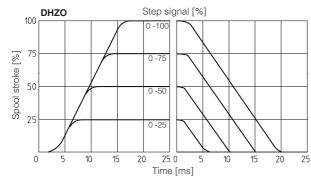

7 = spool S5, L5, D5, V9

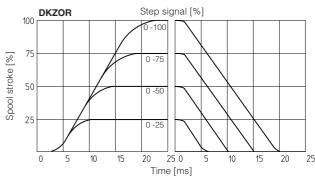

9.4 Response time

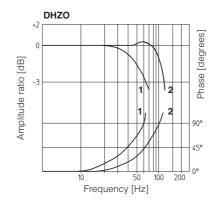

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

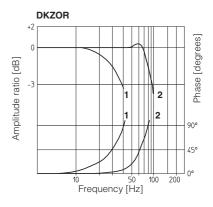

9.5 Bode diagrams

1 = 10% ← 90% nominal stroke $2 = 50\% \pm 5\%$ nominal stroke

9.6 Operation as throttle valve

Single solenoid valves configuration 51 and 53 can be used as simple throttle valves:

Pmax = 250 bar (option /Y advisable)

			DKZOR				
Spool type	L14	L1	S2	L3 S3	L5 S5	L3 S3	L5 S5
Max flow Δp= 70bar [l/min]	6	20	40	80	100	150	250

10 HYDRAULIC OPTIONS

10.1 Option /B

Solenoid, integral electronics and position transducer at side of port A of the main stage. For hydraulic configuration vs reference signal, see section 9.1

10.2 Option /Y

External drain advisable when the valve is used in double flow path, see section 9.6. Option /Y is mandatory if the pressure in port T exceeds 210 bar.

11 ELECTRONIC OPTIONS

Standard driver execution provides on the 7 pin main connector:

Power supply

- 24 VDC must be appropriately stabilized or rectified and filtered; a 2,5 A safety fuse is required in series to each driver power supply Apply at least a 10000 μ F/40 V capacitance to single phase rectifiers or a 4700 μ F/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with ±10 VDC nominal range (pin D, E), proportional to desired valve spool position

Monitor output signal - analog output signal proportional to the actual valve's spool position with ±10VDC nominal range

A minimum time of 300 to 500 ms have be considered between the driver energizing with the 24 Vpc power supply and when the valve is ready to operate. During this time the current to the valve coils is switched to zero.

11.1 Option /F

It provides a Fault output signal in place of the Monitor output signal, to indicate fault conditions of the driver (cable interruption of spool transducers or reference signal - for /I option): Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC

11.2 Option /I

It provides 4 \div 20 mA current reference and monitor signals, instead of the standard ± 10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

11.3 Option /Q

It provides the possibility to enable or disable the valve functioning without cutting the power supply (the valve functioning is disabled but the driver current output stage is still active). To enable the driver supply a 24 VDC on the enable input signal.

11.4 Option /Z

It provides, on the 12 pin main connector, the following additional features:

Enable Input Signal

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: when the Enable signal is set to zero the valve functioning is disabled (zero current to the solenoid) but the driver current output stage is still active.

Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

Power supply for driver's logics and communication - only for TES

Separated power supply for the solenoid (pin 1, 2) and for the digital electronic circuits (pin 9, 10).

Cutting solenoid power supply allows to interrupt the valve functioning but keeping energized the digital electronics thus avoiding fault conditions of the machine fieldbus controller. This condition aids to realize safety systems in compliance with European Norms EN13849-1 (ex EN954-1).

11.5 Options /C - only for SP, SF, SL

Option /C is available to connect pressure (force) transducers with 4 ÷ 20 mA current output signal, instead of the standard ±10 V. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

11.6 Possible combined options

For SN: /FI, /IQ and /IZ

For SP, SF, SL: /CI

15 PROGRAMMING TOOLS - see table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB communication port to the digital driver. E-SW software is available in different versions according to the driver's fieldbus interface:

NP (not present) E-SW-PS, BC (CANopen) E-SW-BC, BP (PROFIBUS DP) E-SW-BP and EH (EtherCAT) E-SW-EH.

through USB communication port also if the driver is connected to the central machine unit via fieldbus.

WARNING: drivers USB port is not isolated!

Use of E-A-SB-USB/OPT isolator adapter is highly recommended for PC protection.

For fieldbus versions, E-SW software permits valve's parameterization
